

RecipeBigUploads

By default, PHP configurations (and in some situations MySQL too) keep you from performing uploads of large files. Usually large means over 1 MB. This can be changed, and the way to do it isn't))TikiWiki-specific((.

[This](#) explains how to configure PHP, assuming you know where your PHP configuration file is. If you don't, run

```
locate php.ini php.conf
```

For MySQL (if you want to store your files in the database instead of the filesystem) you need to change *my.cnf*'s setting *max_allowed_packet* to something high enough.
