ReleaseProcess18rc3

Release 1.8rc3

Bugs fixed

- Fixed thread ordering setting in forum administration (aneuhaus)
- Fixed login bug on Windows (marcius)
- Added primary permission checkings on included page for the include plugin (gmuslera)
- sql bug fixed in calendar, now speed is improved in case of big db (mose)
- Reoccured problem with email_isPublic not honoured in user_information (markusvk)
- Fixed Pear::Auth authentication
- Calendar perms oddities should be fixed now (mose)
- fixed xhtml compliance for principal pages at least, and for BOX module (mose)
- fixed webmail account 'SMTP requires authentication' bug (squee-d)
- Fixed repeated Re: appearing on internal tiki messages Damian

Enhancements

- Modules look-n-feel now can be redefined by theme makers by overloading `module.tpl` and optional `module-error.tpl` (zaufi, gmuslera)
- Some fixes to become a bit more XHTML compliant (gongo)
- Module titles will contain total number if `nonums` module parameter used (zaufi, gmuslera)
- Module *last_modif_pages* now have tooltips showing *when* and *who* change page (zaufi)
- Rewrote of the calendar feature (mose)
- Prepared aqua tabs layout for optionnal use (still need a hardcoded operation) (mose)
- in user menu admin panel replaced list of links by a select dropdown, including appropriate perms and features flags (mose)
- added an option in wiki admin panel to inhibit slideshow (or at least button on wiki pages) (mose)
- global enhancement of the look of the tiki calendar (mose)
- Major fixes in use of the calendar, expecially about optimizing queries so it should be much faster now (mose)
- If no chatrooms are created and Chat is available an empty dropdown is shown, fixed with suitable message instead Damian

-))GreenMetalColorado
-))PurpleMetalColorado

New features

- Wiki plugin USERCOUNT - Damian
- Module *wiki_last_comment* to display wiki page name, title and author (tooltip) of comment added — so long I waiting for Module parameters are: `nonums = y|n` and `moretooltips = y|n` (zaufi)
- PhpLayers integration for use in user menus (mose)
- JsCalendar integration for use in calendar and in forms where a date input is used (mose)
