

Tiki Suite Improve Install Process

What

- Improve ease of installation Tiki Suite.
- Short term: easy copy-pastable instructions
- Medium term: Make RPMs
- Long term: Make apps in the [ClearOS](#) marketplace
 - Make a profile for <https://indiewebcamp.com/IndieMark>

Why

- [Tiki Suite Install](#) is a 7-page document as of 2015-04. It's too difficult to get started.

When

- May-June 2015
- When we are comfortable with the process, we should flush the old test server, and dogfood this procedure (it has been a test / dogfood space and we'll be ready to move to a real space)

Who

Main team

- Charles
- Luis

Mentors

- Marc
- And we'll ask for any needed help from each of the upstream projects

Priorities

High

1. ClearOS
2. [Tiki on ClearOS](#) (12.x)
3. [Roundcube](#) & [SeaMonkey](#)
4. [Syncthing](#)

Medium

1. [Piwik](#)
2. [Openfire](#) Meetings & [Jitsi](#)
3. [FusionPBX](#) & [Jitsi](#)
4. [Kimchi](#)
5. [LXLE](#)
6. [KeePass](#)

Low

1. [Elasticsearch](#) -> low priority because it's only useful if you have a lot of data
2. [Kaltura](#) -> low priority because it's a separate virtual machine, install process is handled by upstream and because integration with Tiki is already well tested.

How

- Improve existing documentation
- Report bugs
- Fix bugs
- Improve install scripts
- Document and improve [Tiki Suite component interoperability](#)
