TikiCastDev

Description

Automatic creation, management and deletion of subdomains, with associated web site and mail handling services (eventually these two services will be Tiki-based).

See TikiCast

Status/RoadMap

- Where are we? Research

Right now we are trying to figure out what this feature is called in SourceForge and elsewhere it is used; and to research what current solutions exist that we might be able to leverage (please update this document if you have any information)

- Where do we want to be? New Feature
- Who is working on what? (Priorities/goals/majors issues/roles): None
- what is the timescale? This will be a long-term goal unless there is sufficient enthusiasm to get things moving more quickly.

TikiTeam

Who is working here generally? No-one (mdavey is threatening to do a little research)

CVS Doc section

This is where new features being developed and only in CVS are documented. When the CVS becomes RC/official release, the info in the CVS docs is transferred to update the official docs (FeatureXDoc).

Discussion/Participation

Where ideas can be exchanged, debated, etc. Interested people can subscribe to the wiki page and/or to these forums as they would a mailing list. text
