	1430 - 1600	Docker-based (and generally VM based turnkey installers of Tiki, eg. turnkeylinux)
	1800	Presentation in Policka about Tiki
Friday 10th July	1000 - 1600	Working on tiki.org sites (and any followup discussion on that), include implementing registration spam protection and user feedback/welcome.
	1600	Head out to local music festival
Saturday 11th July	1000 - 1400	Any other business, followed by heading out to local music festival

Notes / Session reports

Monday Session 1

1) merge info.tiki.org into tiki.org

-> h/w side, get new h/w

migrate from Oliver's Server

Options

A.

info.tiki.org -> tiki.org

tiki.org -> community.tiki.org or users.tiki.org

B.

like now (with upgrade of info.tiki.org)

C. (desided!)

combine both info.tiki.org and tiki.org

-> need different "colors" for content authors ?

-> menu(s) more streamlined and depending on content

TargetGroups / types of people

- I want to learn more
- I am new to Tiki (know nothing)
- I have tried it, tryin' to learn
- I want to download Tiki

- I am a developer
- I am a theme developer/designer

- I want to customise Tiki / improve Tiki
- I want to translate
(e.g. consultants, IRC, etc.)
forum devlist, userlist, docu

Basic structure / Main Blobs

Four main blurbs or blobs for

- Learn More
- Try Tiki
- Get Help
- Join/Register

Footer

Monday Session 2

Monday Session 3

Tuesday Session 1

Notes on Nelson's Addon presentation

- create zip file upload option
- create an Addons section in control panels
- how to register BOTH libs AND services
- install command respects profile names? yes
- discuss addon naming conventions
- revisit addon directory structure:
 - themes/css - less
 - local/custom folder that makes sense only for that addon
 - libs /prefs ->? naming conventions
 - views -> rename to a wiki-plugin? and making it simple, disable addon completely (prefs, plugins, etc)
 - have parent pref for enabling the addon, all other settings are child prefs
 - does it have modules? yes, you can create custom module through a profile
 - how to protect objects (groups, categories, trackers, wiki pages, etc) and other essential things) even from admins
 - .json -> rename url to help_url, have a source_url for the download?
 - navbar: replace with module displayed based on category
 - use symbols as permanent name for any object (groups, categories, trackers, wiki pages, etc), see: lib/smarty_tiki/{addonobjectid}
 - how to have addon specific javascript file?

Tuesday Session 2

Wednesday Session 1

Wednesday Session 2

Thursday Session 1

tiki.org sites issues

- CDN: to move away from Google, and to set up a cdn.tiki.org (replace existing one). To address privacy issues.
- Remember me cookie set to 1 week with new auto-refresh feature turned on. To be consistent across Tiki sites.
- Need docu on how to add new JS/JQ externals to Tiki, e.g. together.js

Thursday Session 2

Thursday Session 3

Friday Session 1

Friday Session 2

Saturday Session 1
