

Top-10 differences

1. Tiki is licensed LGPL, while most projects of this type are GPL.
2. Tiki has an all-in-one [model](#), Swiss-army-knife approach to features, compared to the small core, add third party modules for completion model. Features are not broken with updates. All the features and languages are in a single download. Tiki is, as far as we know, the open source Web application with the most built-in [features](#). This is inherent to the [model](#).
3. We eat our own [DogFood](#)
4. The Tiki project is a friendly one that is very easy to contribute: [How to get commit access](#)
5. Tiki is the only full-featured CMS/Groupware application that has a wiki at the core.
6. Tiki is the only wiki-centered application with so many features — forums, trackers (forms), galleries, blogs, etc.
7. Tiki page layouts are fluid by design to accommodate even extreme content dimensions.
8. Theme application is very flexible, with even per-feature, per-page or per-content category application possible.
9. Tiki developers follow [three simple rules](#).
10. Tiki Community follows an Open Organization explicit [Social Contract](#) and everyone can participate to the [project direction](#).
