UserPageelbonian

I run a medium-large discussion forum at iidb.org and one of our users suggested that we begin to compile some "best of" information from nearly four years of posts. This prompted me to look again at Tiki, which I had first experimented with when 1.6 first came out last year. Since I found that 1.8 was just released, and it looks like you folks are testing things a bit more, I came back to try it again.

Now, if I can just remember all of the futzing around I had to do to get it to work last year.... 😵
