

UserPagesting

in Tikiwiki,

1. for most URL that contains unicode Traditional Chinese characters, IE 5 nor 6 can handle it well. To correct that, you have to edit the function {string|escape:url}.

2. PDF generation can't see Chinese characters

- ezPDF

3. Can't search Chinese characters

- cause : Tikiwiki use MySQL fulltext function

4. To enable Chinese login ID:

- modify tiki-register.php

```
//Marked by Sting, allow Chinese login name
// if(!preg_match_all("/[A-Z0-9a-z]\|-+/",$_REQUEST['name'],$matches)) {
// $smarty->assign('msg',tra("Invalid username"));
// $smarty->display("styles/$style_base/error.tpl");
// die;
// }
```

- modif Smarty/plugins/modifier.userlink.php ,

```
$user_encode=urlencode($user);
return "<a class='$class' href='tiki-user_information.php?view_user=$user_enc
ode'>$user</a>";
```

5. No Good way to do NewUserPage similar concept for Chinese page title

- Try to take out some parse rule and add new parse rule

6. modify lib/tikilib.php

parse_html()

7. For Outlook express didn't handle unicode subject well, we need to change the mail function behavior in tikiwiki from unicode to big5

edit tikilib.php,k search charset , use the function iconv(From charset, To charset, \$String)
