

Wiki3d

A very cool tool to visualize links between pages. Wiki3d is a way to view and browse the wiki structure in 3D.

Table of contents

- [Usage](#)
 - [Interaction](#)
 - [Admin](#)
 - [RFEs](#)
-

Usage

Click on the little bat like icon : 

Then you'll get an image, if you have Java installed, like this: 

Interaction

The possible actions are

- Drag mouse on an empty space to rotate the graph
- Rotate fast and release, like throwing, to make it keep spinning
- Drag nodes to move them, the graph will balance itself again when you release
- Click nodes to navigate to them
- Click center node to open the node URL in your browser window

Admin

Admin >Wiki>3d 

Also ensure the option "XMLRPC API" is enabled in Admin >Features. This feature is only enabled when some themes are chosen, like:

- moreneat.css
- TODO: list up the themes

RFEs

- Support for hotwords
- Support for indication of external links
- Client control of number of levels/depth of visualization
- Support for UTF-8 encoded page names

Existing pages and not yet created ones can be displayed in different colors, usually in green and red respectively.
