General Description

Tiki offers a simple way for creating pages that will be displayed to the users and that can be linked from/to any place in your site. Just create an HTML page using the editor and then you can access it using *tiki-page.php?pageName=somepage*. This simple system can be extended with the addition of dynamic pages. A dynamic page is an HTML page where you can use the syntax *{ed id=foo}* to create dynamic sections inside the page. An editor will be automatically available to edit each dynamic zone of a dynamic page. Dynamic pages will be automatically updated without a browser refresh and without making the user refresh the page. So dynamic pages are great for sport scores, stock information, real time coverage of events or other users that you may imagine.
